

WODA2

→ Tool, Equipment and Process Management System

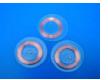

The WODA2 software is based on the RFID technology and guarantees an effectual monitoring, transparency, availability and documentation of all properties and process expiries in companies!

System description:

The system **WODA2** contains an extensive software and hardware equipment, equipped with many features. Of this object and monitoring management system (machines, tools, materials, manpower ...) encompasses **3 main components**:

1) WODA2 Transponder

- For the marking of objects and people
- Tools and equipment are labeled by RFID tags and the consumable material by barcodes. Personnel will be identified with special personnel transponders.

TRP Clear Disc 125kHz

TRP World Tag 125kHz

TRP PU Tag 125kHz

2) WODA2 Handheld Reader

- For the identification of the RFID tags and barcodes
- Because of the identification of the object transponders by the handheld reader and the data storage in the WODA2 software you know at any time which worker has borrowed an object as well as the current position and holding time.

HLG Databoy

HLG TDS Recon

3) WODA2 Software

- For the management, maintenance, monitoring and efficient provision of tools, materials, machines, locations and manpower
- Each of your construction sites receives an identification number (cost centre). The data of the materials, tools, and personnel data are stored with a time stamp, date and employee number in the software for the respective building site.

In the WODA2 software you administer

- Tools, machines, material and other property lists
- Issuance of tools and machines
- Repair and maintenance
- Stocktaking/Inventories
- Locations (storage depots, construction sites, garages ...)
- Personnel
- Wireless communication
- Resource management (objects and manpower)

Customer benefit:

- Uniform system for the administration
- Clear marking and identification of the objects
- Efficient use of the tools and machines
- Tracking and clear representation of the distributed objects
- Paperless administration of the issuance and residence time of the tools and machines, with time stamp and employee number
- Paperless information about the current location of an object
- Automatic documentation of repair dates, servicing dates and maintenance dates
- · Permanent, automatic and electronic stocktaking
- Monitoring of the construction site as well as stationary and mobile objects after the working hours
- Saving of time on account of improved criteria
- Investment minimization for new tools and machines

Summary:

- → WODA2 allows a quick and easy work performance and simplifies the process and administration tasks.
- → The system integrates the essential information and data into the WODA2 software and guarantees the current availability of manpower, machines and tools as well as operational readiness of the necessary process resources.
